1) Lighting Library Documents: 'Measure' Tool:

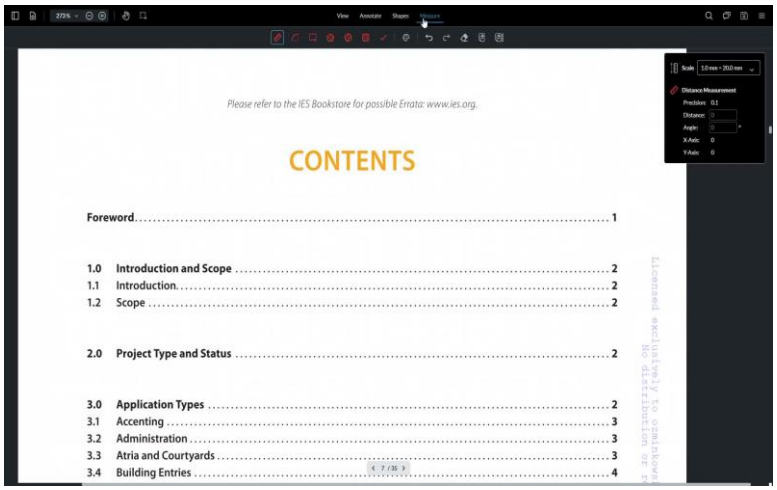

Summary: This Loom explains how to use the Measure feature in the web viewer to add visual measurement marks and adjust settings. It covers distance measurement with selectable scales, including adding a new scale using presets, and drawing straight line or arc measurements by clicking and releasing at defined points. The video also demonstrates perimeter measurement with multiple clicks and area measurement for polygons, circles, ovals, and squares, and notes you can remove measurements using the delete button or keyboard delete key. It further mentions erasing annotations and using count measurement features, then adjusting annotation attributes like color and opacity through the style options.

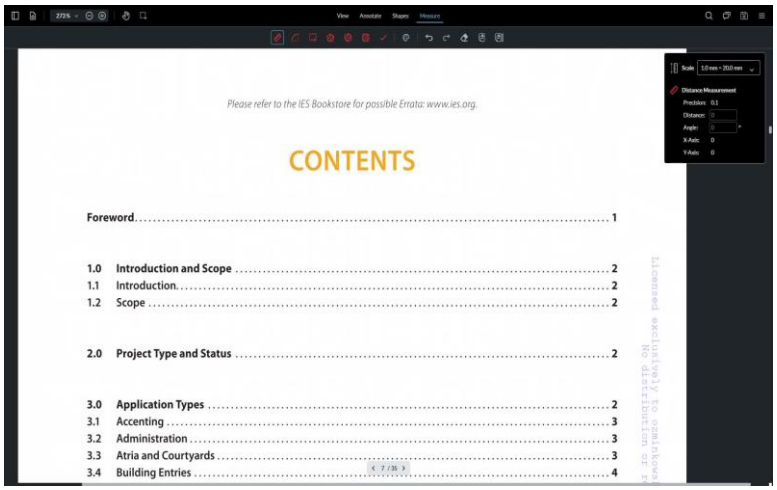

How to Use the Measure Feature in the Web Viewer

2) **1. Open the Measure tools and understand what they do** 0:01
3) 

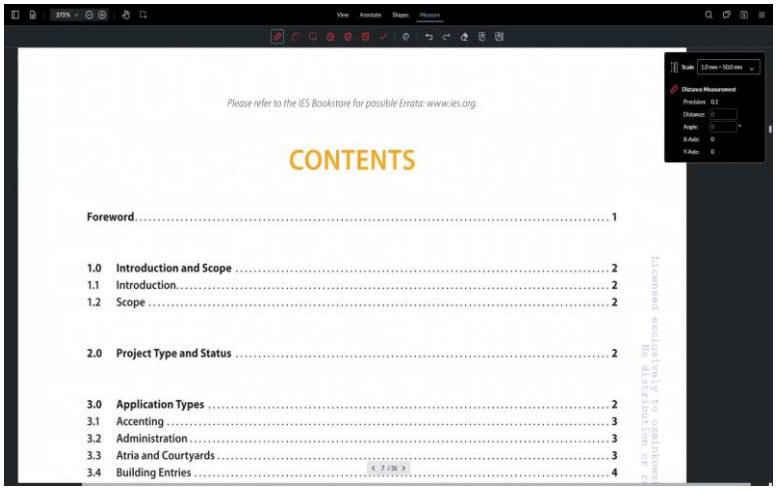

4) The **Measure** feature adds visual measurement marks to content.
5) You can control measurement appearance and behavior, including:
    a. color
    b. opacity
    c. stroke thickness
    d. scale

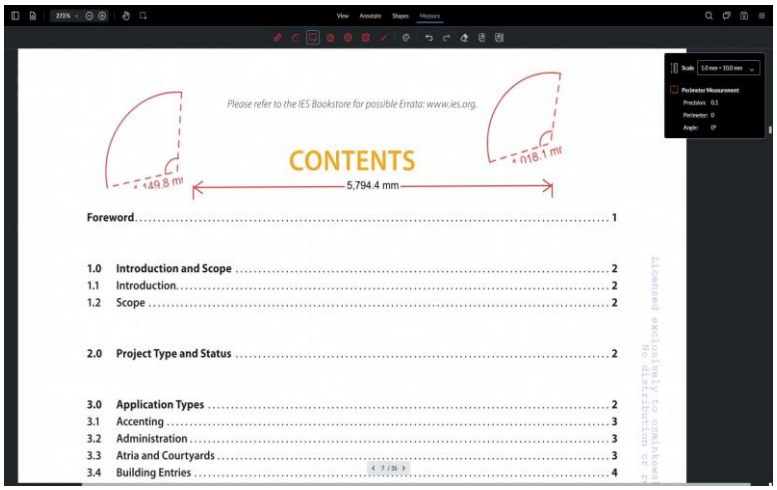

e. precision
f. arrow style

6) Use these tools when you need to communicate dimensions clearly during document review.
7) If you have an active subscription, the **Measure ribbon** appears in the web viewer interface.
8) **2. Choose the correct scale before measuring** 0:29
9) 

10) Different measurement types are available, but the first step is usually selecting the right **scale**.
11) If the scale you need is not available, you can add a new one.
12) You can also adjust the scale between **paper units** and **display units**.
13) Select a preset scale before drawing so the measurement is calculated correctly.
14) **3. Create a standard distance measurement** 0:41
15) 

16) Use the typical **distance measurement** tool for straight-line measurements.
17) Steps:
    a. Click and hold at the starting point.
    b. Drag to the ending point.
    c. Release to place the measurement.

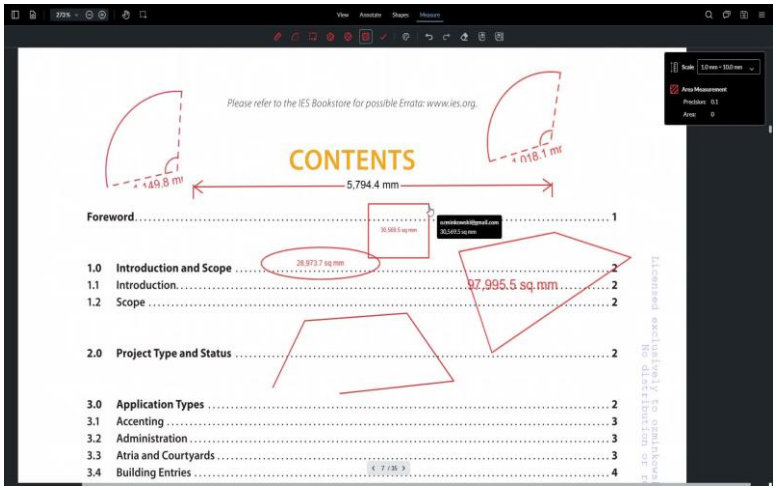

18) Make sure the scale is set first so the distance displays accurately.
19) **4. Draw an arc measurement** 1:00
20) 

21) Use the **arc measurement** tool for curved distances.
22) Steps:
    a. Click once to start.
    b. Click a second time to define the curve.
    c. Click a third time along the arc to complete it.
23) If needed, adjust the units or scale before drawing the arc.
24) **5. Measure perimeter and area shapes** 1:32
25) 

26) Use the **perimeter** tool by clicking multiple points around the shape.
27) When finished, **double-click** to complete the perimeter.
28) You can hover over the line to view the measurement, which appears in the upper-right corner.
29) For **area** measurements:
    a. Click points to define a polygon.
    b. Finish by clicking the final point into the crosshairs.
30) You can also measure:
    a. a **circle** by clicking and dragging
    b. an **oval** by clicking and dragging

c. a **square** by clicking and dragging

31) **6. Delete measurements or clear annotations** 2:17

32) 

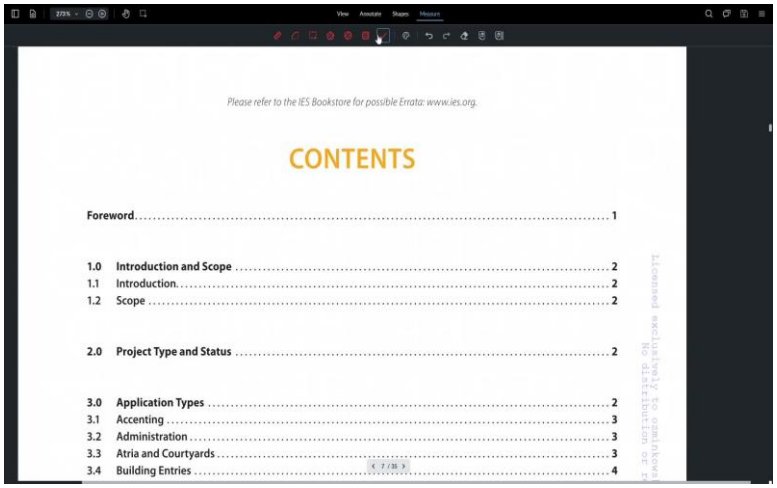

33) Remove a single measurement or multiple measurements by:

a. selecting the **Delete** button, or
b. pressing the **Delete** key on your keyboard.

34) To remove annotations more broadly:

a. use **Erase all annotations from this page** to clear the current page
b. use **Erase all annotations from entire document** to clear everything in the file

35) **7. Edit measurement styling and add comments** 2:40

36) 

37) You can select any annotation and change its attributes.

38) Update styling from either:

a. the pop-up style options, or
b. the **Style** tab on the left side.

39) Common editable attributes include:

a. color
b. opacity

40) After selecting a measurement, you can also hover over it and add a **comment**.

2) Troubleshoot IS Lighting Library Viewer Issues:

Summary: This Loom provides troubleshooting guidance for using the IS Lighting Library viewer. It recommends using a supported browser: on desktop, Chrome, Firefox, Edge, or Safari, and on mobile or tablet, Safari Mobile, Chrome Mobile, or Firefox Mobile. If the viewer does not load or behaves unexpectedly, first confirm it is opened in one of the supported browsers. The Loom also advises avoiding clearing the browser cache and not using incognito or private browsing, since those modes may prevent the viewer from saving or loading content correctly.

How to Troubleshoot the IS Lighting Library Viewer Browser Issues

1. Start with a supported browser 0:00

- For the best experience, open the IS Lighting Library viewer in a supported browser.
- **Desktop supported browsers:** Chrome, Firefox, Edge, and Safari.

- If the viewer is not loading or behaving correctly, this is the first thing to check.

2. Use a supported mobile or tablet browser 0:14

- On mobile and tablet devices, use one of the supported mobile browsers.
- **Supported mobile browsers:** Safari Mobile, Chrome Mobile, or Firefox Mobile.
- If the viewer looks broken or fails to load, confirm you are using one of these browsers.

3. Avoid clearing browser cache for the lighting library 0:31

- Do **not** clear the cache in the browser you use for the lighting library.
- Clearing cache may remove saved viewer data.
- This can also remove saved documents needed for offline access.

4. Do not use incognito or private browsing mode 0:44

- Avoid opening the lighting library in incognito, private, or similar browser windows.
- These modes can prevent the viewer from saving or loading content properly.
- Use a normal browser window instead.

5. Continue troubleshooting if needed 0:56

- After confirming the browser and browsing mode, proceed with any additional troubleshooting steps.
- If the issue still remains, the problem is likely not caused by browser compatibility or private browsing mode.

3) Lighting Library Documents: Annotations – Underlining:

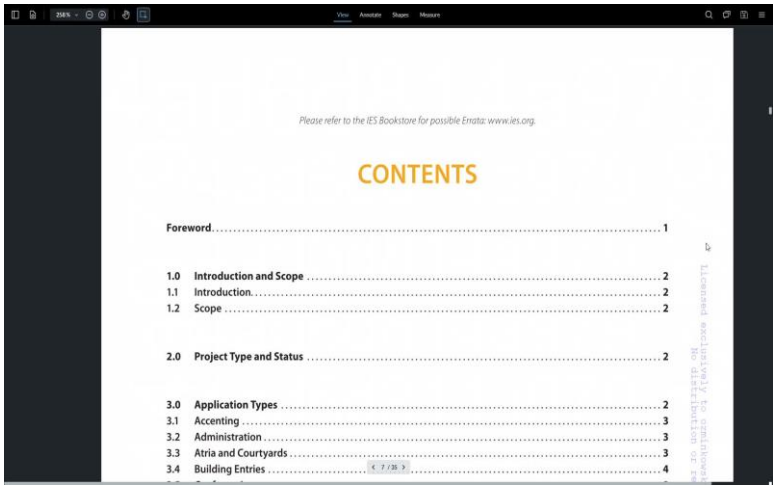

summary: This Loom explains how to use underline style annotations in the web viewer. It describes three underline options available on the annotate ribbon: standard underline (shortcut U), squiggly underline (shortcut G), and a freehand drawing tool, which can mark content that is not selectable text. The video notes that you can click and drag to apply the markup. It also mentions that, like highlights, you can select existing annotations and change their color and opacity using the style options.
How to Use Underline, Squiggly, and Freehand Markup Styles in the Web Viewer

1. Understand what underline-style markup is for 0:01

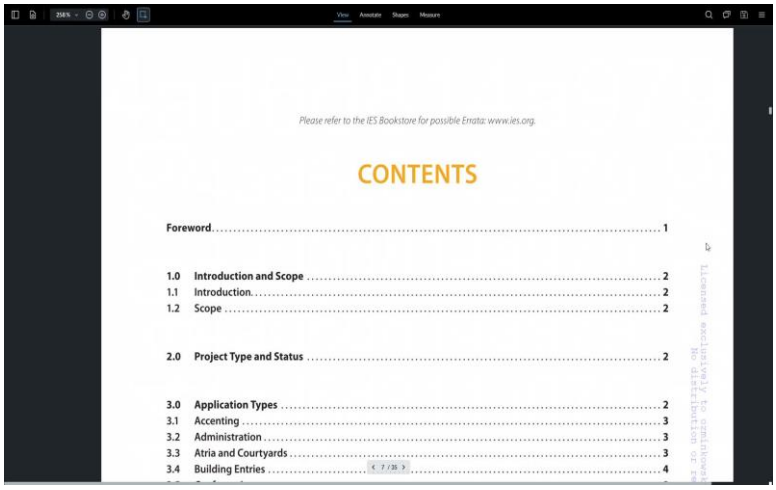

- Underline-style markup works similarly to highlights, but uses different visual styles.
- You can use it to:
    - Call attention to text
    - Mark content that needs review
    - Visually distinguish different kinds of markup
- Available styles include:
    - Underline
    - Strikeout
    - Squiggly

2. Open the annotate ribbon in the web viewer 0:18

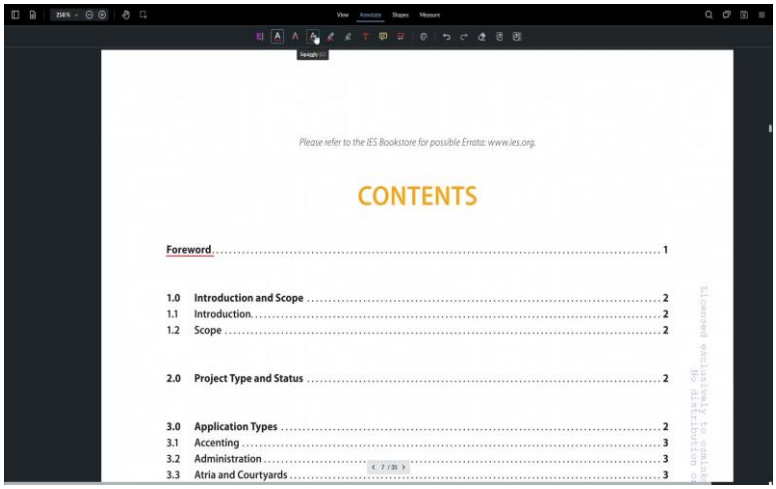

- If you have an active subscription, the annotate ribbon should appear in the web viewer interface.
- This ribbon contains the markup tools used for underline-style annotations.

3. Choose an underline style and apply it to text 0:18

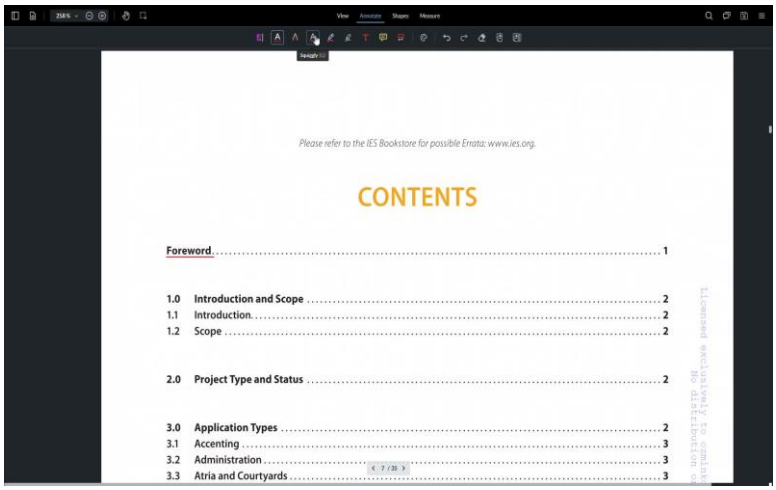

- Select one of the underline tools from the annotate ribbon.
- The first option is standard underline.
- Shortcut: U
- To apply it:
    - Click and drag across the text you want to mark

4. Use squiggly markup for a different visual style 0:36

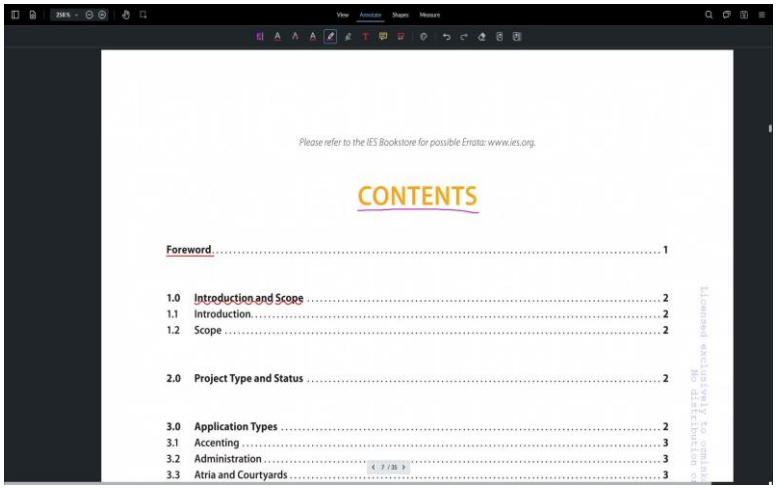

- The second option is squiggly markup.
- Shortcut: G
- To apply it:
    - Click and drag over the text, just like with underline

5. Use freehand markup for non-text content 0:36

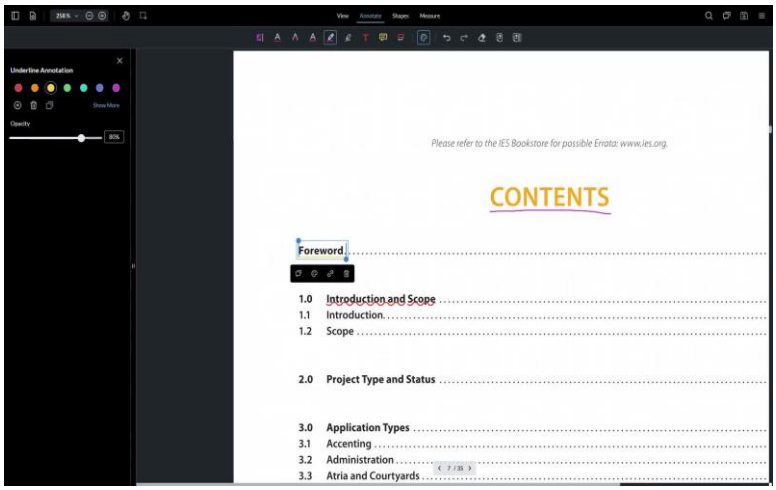

- The third option is the freehand drawing tool.
- This is useful when the content you want to mark is not selectable text in the document body.
- Use it to draw an underline manually where needed.

6. Customize color and opacity for your markup 0:57

- You can change the style settings for any markup you create.
- Select a highlight or underline annotation.
- Then open the style tab:
    - From the pop-up window, or
    - From the style palette in the annotate ribbon
- From there, choose:
    - Color
    - Opacity

7. Apply different colors and opacity levels as needed 1:17

- Each markup style can use any color.
- Each markup style can also use any opacity.
- This lets you visually organize annotations in the way that works best for your review process.

4) Lighting Library Documents: Annotations - Adding Shapes:

summary: This Loom explains how to add and format shapes in the IES Lighting Library viewer to highlight areas during review. Viewers with an active subscription can use the shapes ribbon in the web interface to select shape types such as rectangles, ellipses, arcs, polygons, clouds, lines, polylines, and arrows. The creator shows how to draw a shape by clicking to start and click again to finish, then assign attributes through the pop-up window or the style tab on the left. You can adjust color, stroke thickness, stroke style, fill color, and opacity, and add a comment to the shape; mistakes can be removed using the keyboard delete key on the relevant delayed key.

How to Add and Edit Shapes in the IES Lighting Library Viewer

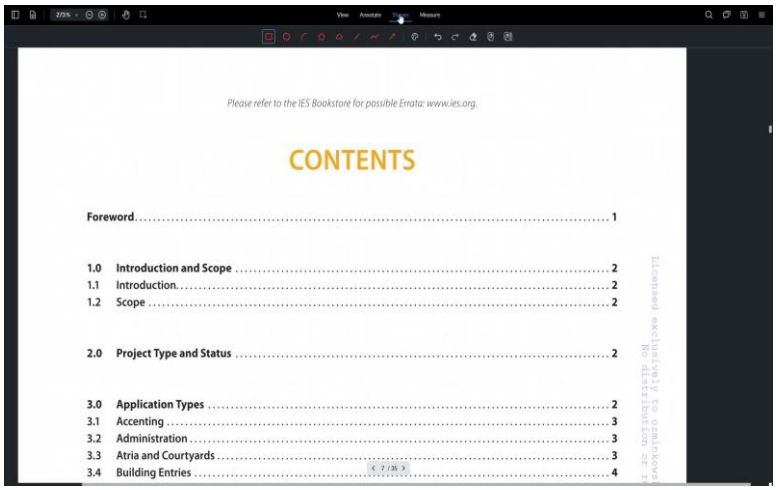

1. Open the Shapes Tools in the Viewer 0:01

- Shapes are used to:
  - Call attention to an area
  - Outline content
  - Create visual markers during review

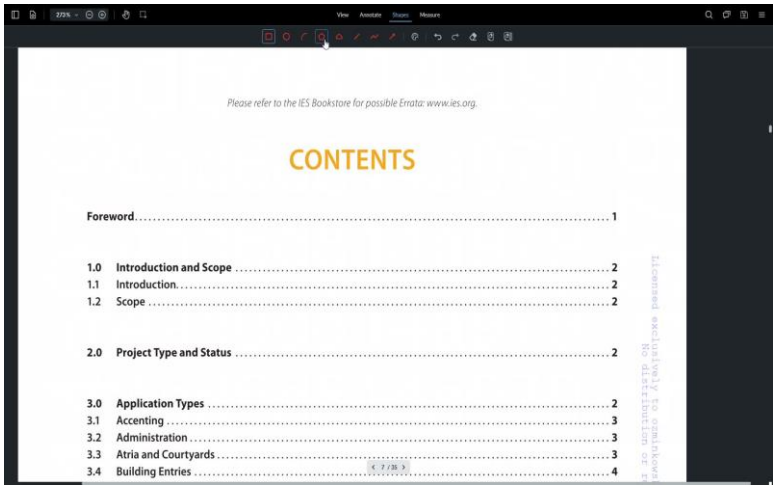

- In the IES Lighting Library web viewer, the **Shapes** ribbon should be available if you have an active subscription.

2. Choose a Shape Type 0:22

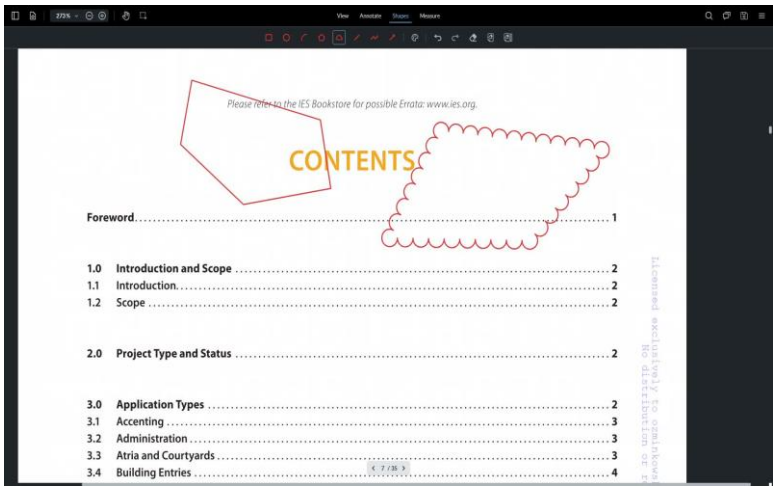

- Go to the **Shapes** section in the top toolbar.
- Select the shape you want to add.
- Available shape tools include:
    - Rectangle (**R**)
    - Ellipse (**O**)
    - Arc
    - Polygon
    - Cloud
    - Line
    - Polyline
    - Arrow

3. Draw the Shape on the Content 0:45

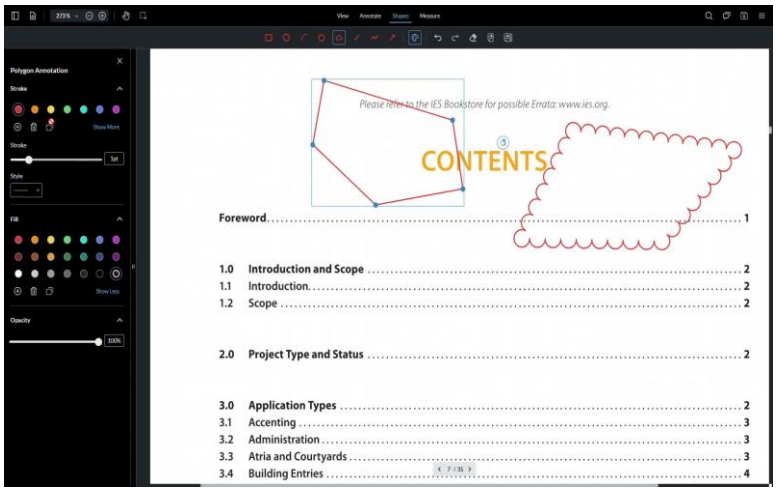

- Click once to start placing the shape.
- Click again to complete it.
- Repeat as needed to add multiple shapes to the content.

4. Edit Shape Attributes 1:07

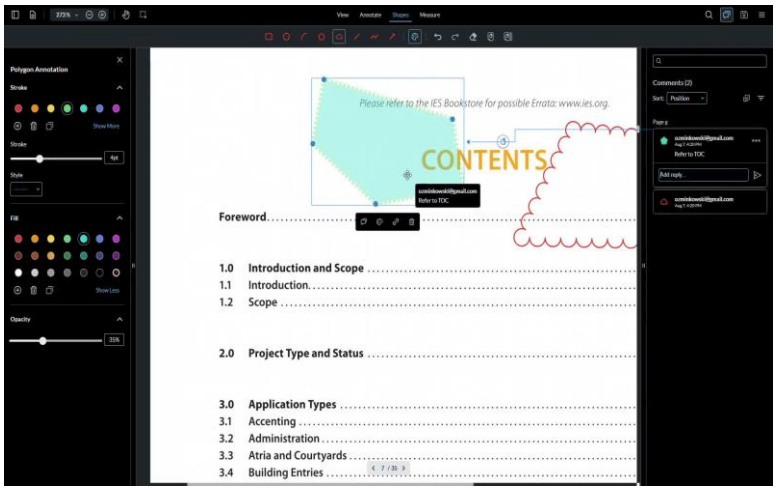

- Click any shape to select it.
- Edit its properties using either:
  - The pop-up style window, or
  - The **Style** tab on the left side
- You can adjust:
  - Color
  - Stroke thickness
  - Stroke style
  - Fill color
  - Opacity

5. Add a Comment or Save the Shape 1:22

- After styling the shape, click away to finish.
- Or open the **Comment** tab to attach a comment to the shape.
- Saving the comment also saves the shape annotation.

6. Delete a Shape or Comment 1:49

- If you make a mistake or want to remove an annotation:
  - Click the **Delete** button, or
  - Press the **Delete** key on your keyboard
- This works for shapes and other comments as well.

https://loom.com/share/e4ae0b5dbca74f2a89021f6166a20653

5) Lighting Library Documents: Annotations - Removing or Restoring:

Summary: This Loom explains how to correct or remove annotations in the web viewer. If you have an active subscription, you will see an annotate ribbon in the interface. You can undo the most recent annotation, redo to restore one you removed, or use the eraser tool to remove selected markup. It also covers erasing annotations from a single page or all annotations from the entire document, with confirmation prompts for each option.

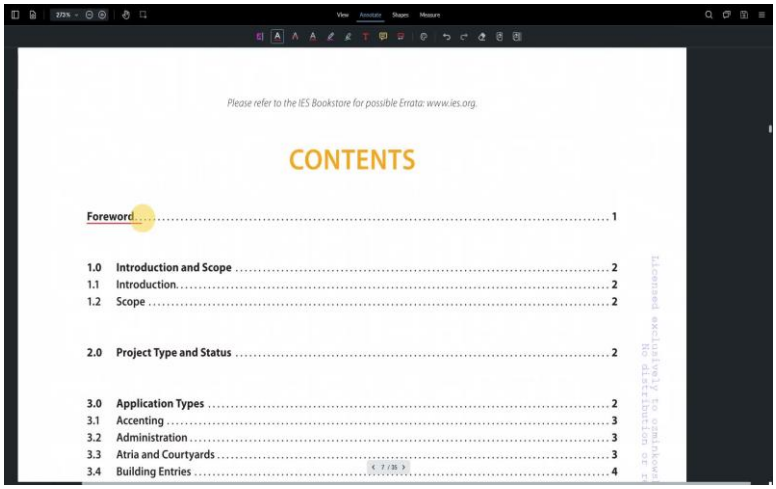

How to Correct or Remove Annotations in the Web Viewer

1. Open the annotation tools in the web viewer 0:02

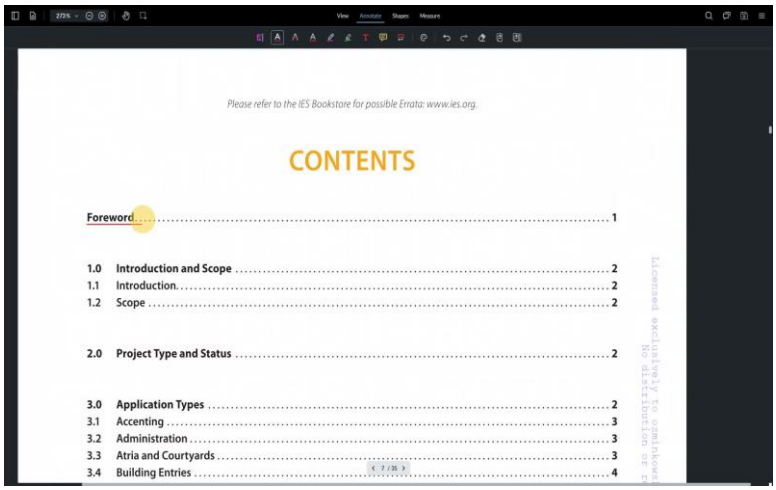

- In the web viewer, look for the **annotate ribbon** if you have an active subscription.
- This ribbon contains the tools used to edit or remove annotations.

2. Undo or redo recent annotation changes 0:13

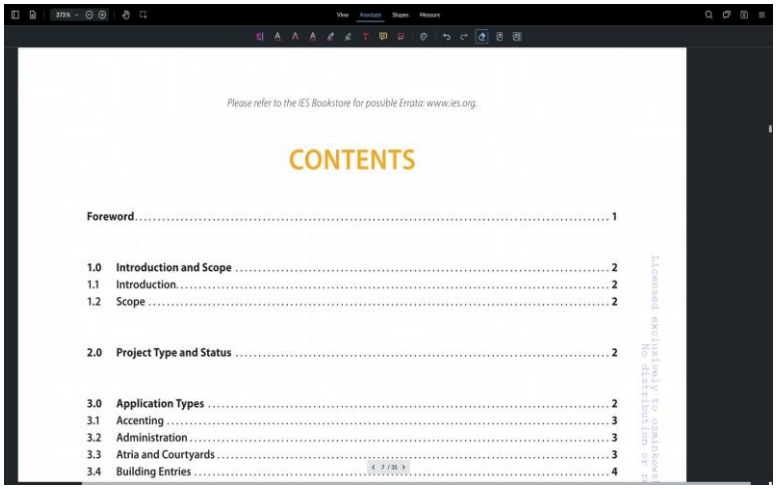

- Use **Undo** to reverse the most recent annotation action.
- Use **Redo** to restore an annotation you just removed.
- These options are helpful for quickly correcting recent changes.

3. Remove selected markup with the eraser tool 0:13

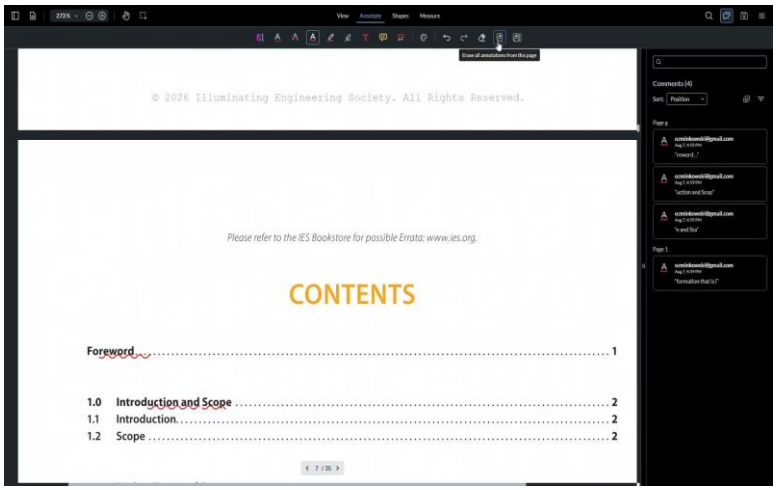

- Select the **eraser tool** to remove specific markup.
- Use this when you want to delete only certain annotations instead of all of them.

4. Erase annotations from a single page or the full document 0:28

- Use the additional tools at the top to remove annotations in bulk.
- Choose **erase all annotations from this page** to clear only the current page.
- Choose **erase all annotations from the entire content** to clear the whole document.

5. Confirm the deletion 0:41

- After selecting a bulk erase option, click **Yes** to confirm.
- This confirmation applies whether you are deleting annotations from one page or from the entire document.

6) How to Add Notes and Callouts in IS Lighting Library:

summary: This Loom explains how to add and manage in-document feedback in the IS Lighting Library viewer using notes and comments. Notes act like digital sticky notes that appear in the comments panel on the specific page, with options to color code them for reference and search within them. The video shows adding call-outs via the annotate ribbon, including customizing font, styling, stroke and fill, opacity, and reply behavior, similar to Adobe Acrobat. It also covers commenting on existing highlights or underlines and using the comments search bar to jump to results such as the keyword corridor.

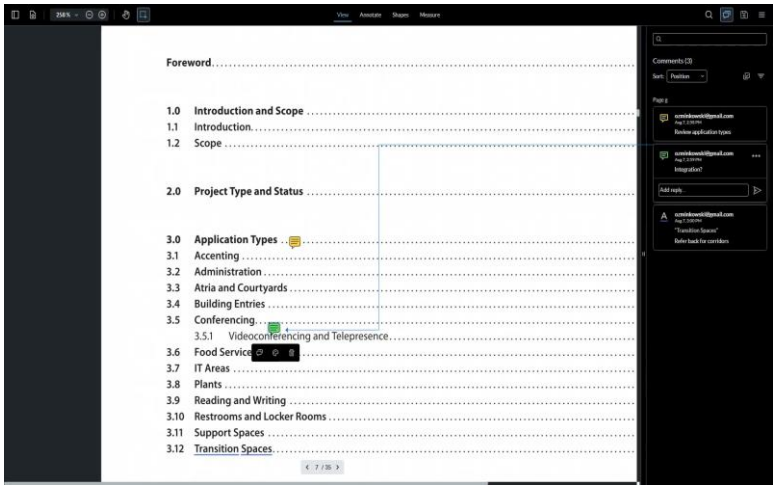

How to Add, Style, and Search Notes and Comments in the IES Lighting Library Viewer

1. Open the annotation tools and choose the Note feature 1:01

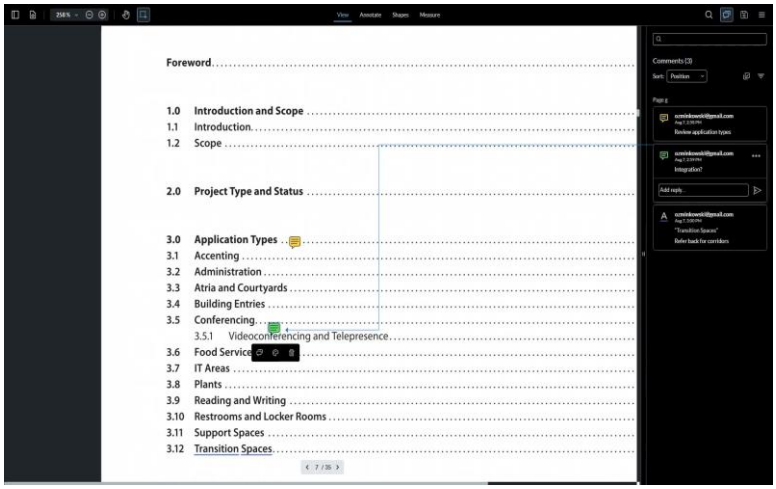

- In the web viewer, look for the **Annotate** ribbon if you have an active subscription.
- Click the **Note** icon, or use the shortcut **N**.
- If needed, review the **highlight** and **underline** tutorials first, since those can help you create comments more efficiently.

2. Place a note and add your comment 0:17

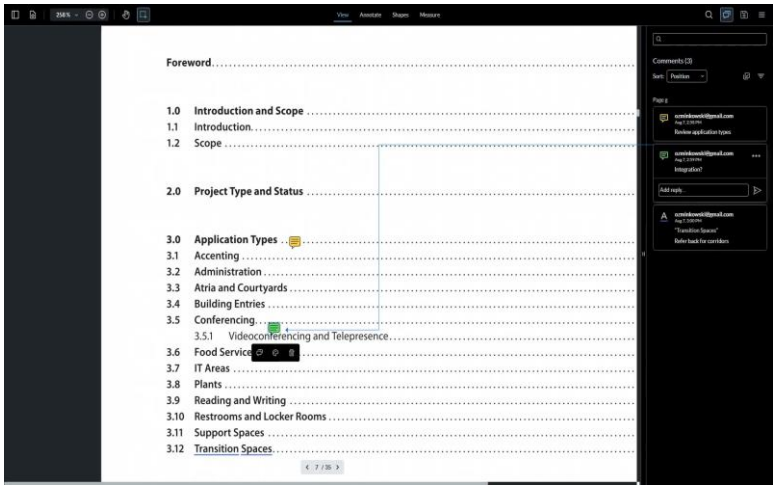

- Notes behave like digital sticky notes.
- Click anywhere on the document to place the note.
- Type your feedback into the note pop-up and save it.
- The note will appear in the **Comments** panel on the right, linked to the page where it was added.

3. Customize note appearance with color and opacity 0:38

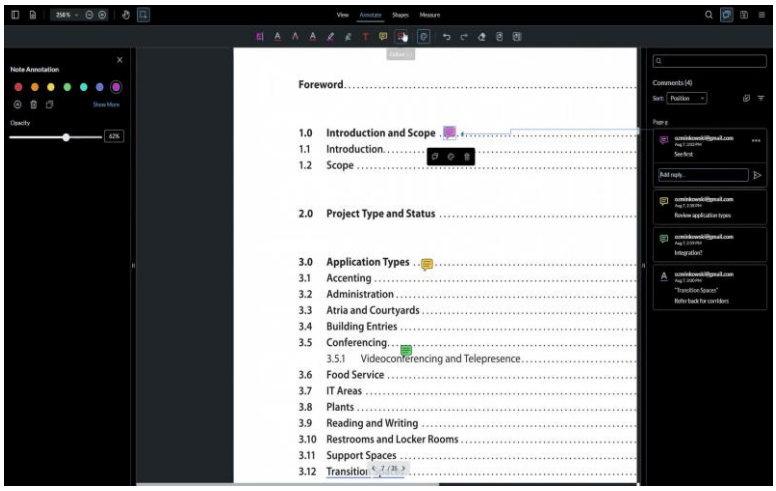

- Use the **palette** icon in the note pop-up to assign a color.
- You can also adjust styling from the left-side styling tab.
- If needed, change the **opacity** for the note.
- The comments panel updates to reflect the selected color.

4. Use notes to organize and review feedback efficiently 0:27

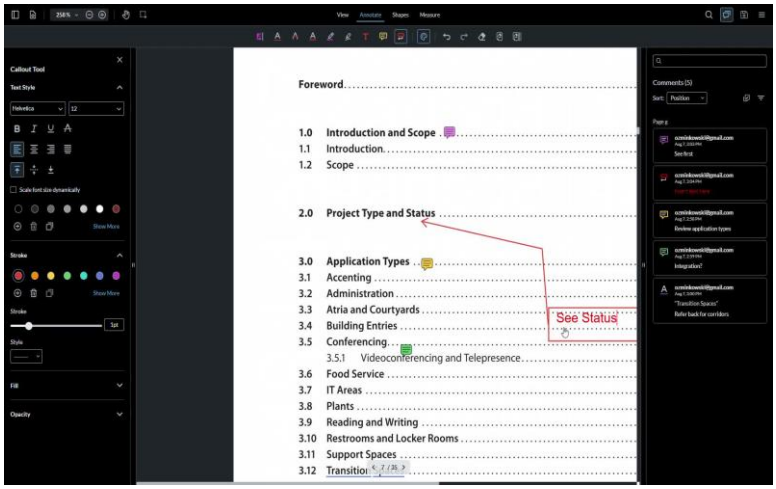

- Notes make it easy to jump between specific feedback items.
- You can review multiple comments and search within notes when a document has many annotations.
- Comments stay organized in the right-hand panel in document order.

5. Add a callout annotation for visible on-document feedback 1:51

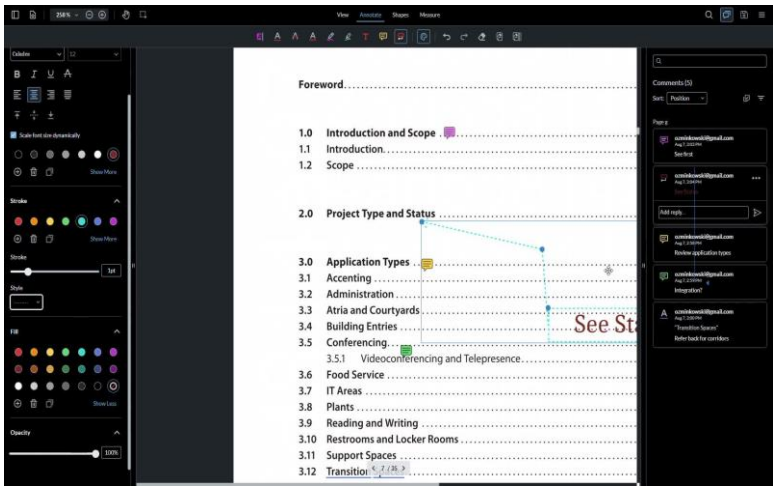

- Select the **Callout** tool from the annotate ribbon.
- Click and drag to place the callout on the document.
- Enter your text so it appears directly on top of the document during review.
- Callouts are useful when you want feedback to be highly visible.

6. Format callouts to match your needs 2:09

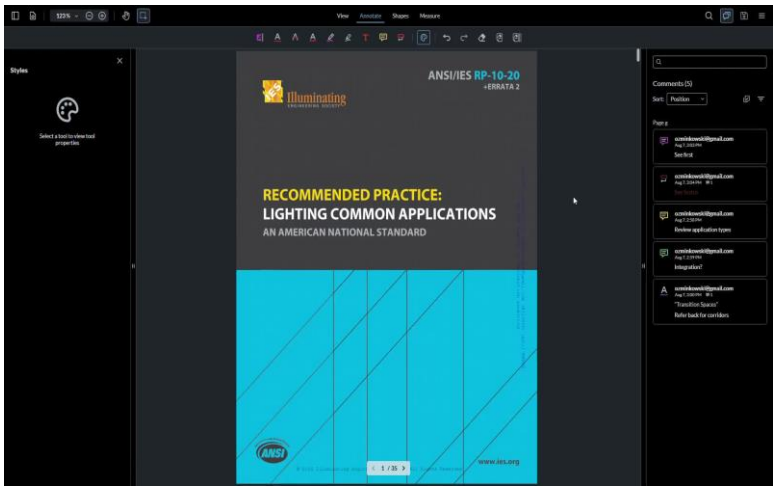

- Callouts offer more styling controls than a basic note.
- You can adjust:
    - **Font**
    - **Font size**
    - **Alignment**
    - **Color**
    - **Dynamic font size**
    - **Stroke color**
    - **Style**
    - **Fill**
    - **Opacity**
- Use these options to make the callout clear and readable.

7. Reply to comments and create links from existing annotations 2:43

- Comments appear in the right-hand panel and can be replied to, similar to Adobe Acrobat.
- You can also click a previously highlighted or underlined item to add a comment.
- From the comment pop-up, you can:
    - Add a reply
    - Adjust styling
    - Create a hyperlink to any page in the document

8. Search comments and jump back to specific feedback 3:15

- Use the search bar in the comments section to find notes by keyword.
- Example: search for **"corridor"** to filter matching comments.
- If the comments panel is hidden, click the **Comments** button again to restore it.
- Select a search result to jump directly back to that comment in the document.

7) Lighting Library Documents: Annotations – Highlighting:

summary: This Loom explains how to use the IES Lighting Library viewer's annotation tools, focusing on text and freehand highlighting. If you have an active subscription, you will see the Annotate ribbon with options such as color choices, pen styles, and font controls. It covers two highlight methods: a

traditional click-and-drag text highlight where you can set color and opacity, and a freehand highlight tool for non-text areas where you can adjust color and opacity. You can also change highlight color and opacity through the style pop-up or the left tab in your browser.

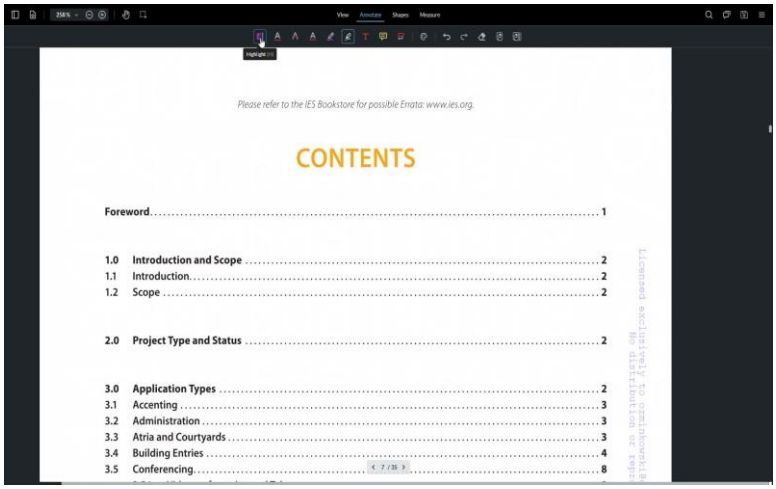

How to Use Annotation Tools in the IES Lighting Library Viewer

1. Open the Annotate ribbon in the viewer 0:00

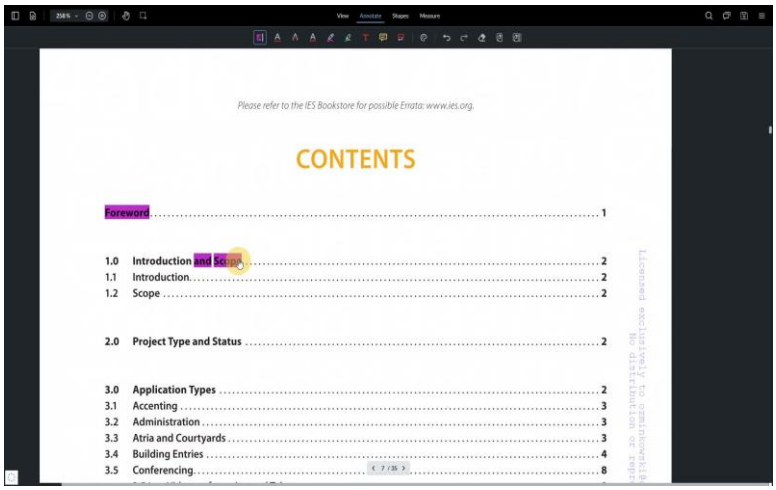

- The IES Lighting Library viewer includes a set of annotation tools in the toolbar.
- If you have an active subscription, you should see the **Annotate** ribbon in the viewer interface.
- These tools include options for:
    - Color selection
    - Pen styles
    - Highlighter thickness
    - Font options
    - Other related controls

2. Use the standard text highlight tool 0:24

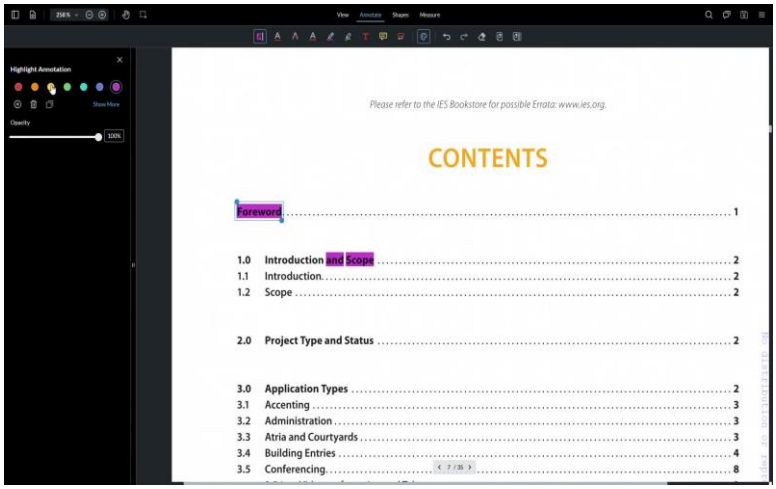

- Use the first highlighting option for normal text.
- **Click and drag** over the text you want to highlight.
- Repeat the action as needed to highlight additional text.

3. Adjust highlight color and opacity 0:35

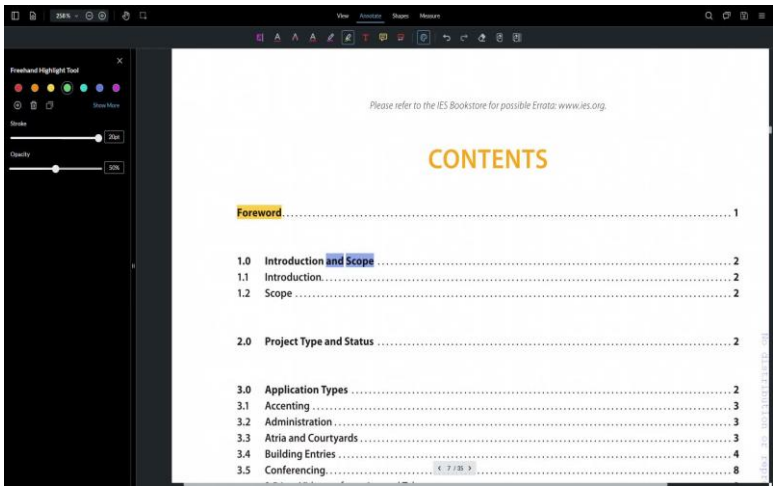

- After creating a highlight, you can change its appearance.
- Use either:
  - The **pop-up style tab**, or
  - The **left tab** in your browser
- From there, select the highlight and choose a new:
  - Color
  - Opacity

4. Use the freehand highlight tool for non-text items 0:50

- The viewer also includes a **freehand highlight** tool.
- This is useful when you need to highlight something that is **not text**.
- Click and drag to draw the highlight manually.

5. Edit the freehand highlight appearance 1:02

- Select the freehand highlight you want to modify.
- Choose a new color.
- Adjust the opacity using the opacity control.

https://loom.com/share/f55200f551cb4f02a0ca3df41d9174b9

8) Lighting Library Documents: Annotations - Text Comments:

Summary: This Loom demonstrates how to use the text tool to place typed content directly onto a document. It shows selecting the free text icon or pressing T, dragging a rectangle to create a text box, clicking away, and then formatting the text using the pop-up style button or the style tab. Viewers can adjust font, font size, alignment, dynamic font scaling, font color, border, fill, and opacity for the entire comment. The Loom also notes that these typed comments are saved in the comments tab on the right for easy later viewing, and they can be left as is or added as a comment to find them again.

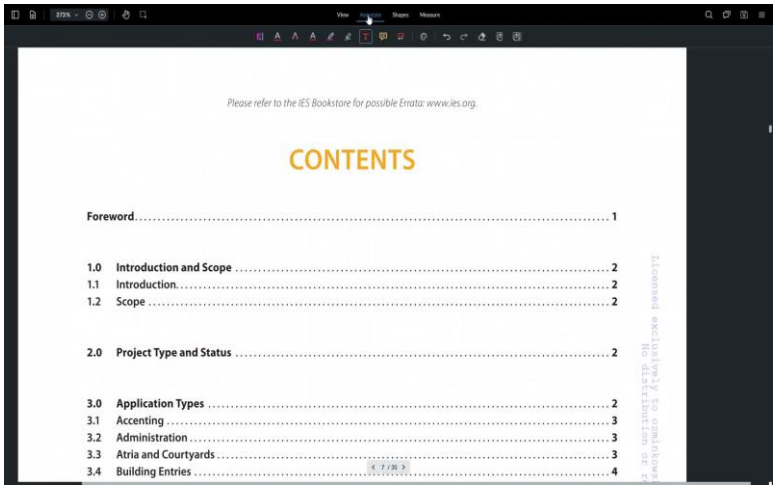

How to Add and Format Free Text on a Document

1. Open the text tool in the annotate ribbon 0:01

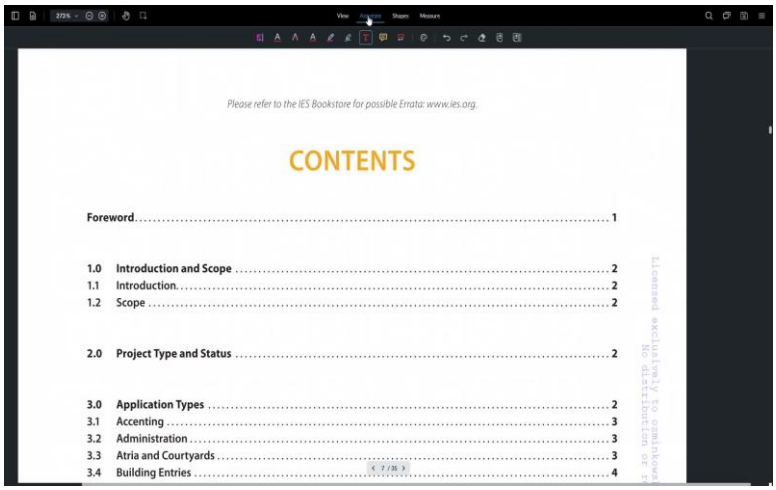

- In the web viewer, look for the **annotate ribbon** if you have an active subscription.
- This section shows how to place **typed text directly onto a document** using the text tool.

2. Place a free text box on the document 0:15

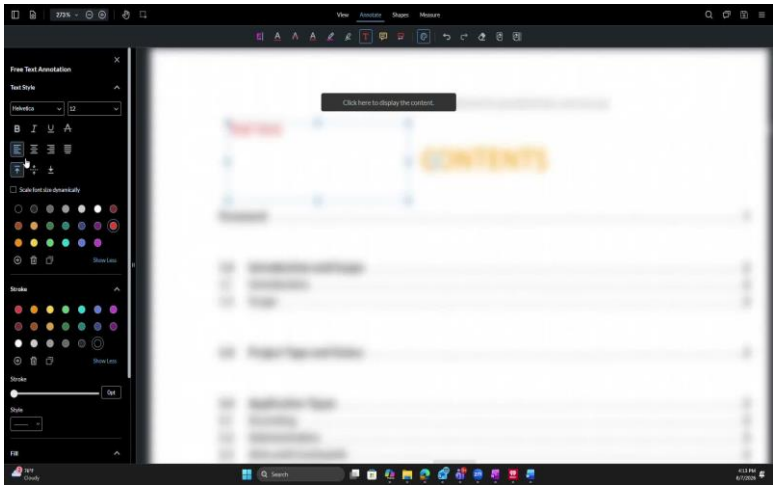

- Select the **Free Text** icon, or use the shortcut **T**.
- **Drag a rectangle** on the document where you want the text to appear.
- Click away when you're finished placing the text box.

3. Format the text appearance 0:15

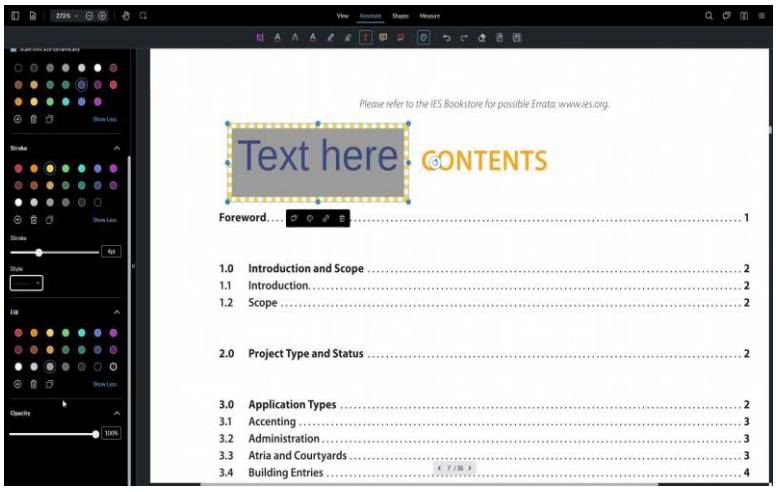

- Use the **pop-up style button** or the **Style** tab on the left side.
- Adjust formatting options such as:
  - **Font**
  - **Font size**
  - **Alignment**
  - **Dynamic font scaling**

4. Customize color, border, fill, and opacity 0:39

- Change the **font color**.
- Add a **border** around the text box.
- Apply a **fill** color.
- Set the **opacity** for the entire comment.

5. Add an optional comment and find it later 0:59

- If needed, add a **comment** to make the text easier to find later.
- Like other comments, it will appear in the **Comments** tab on the right for later viewing.
