

Lighting Library: “Read”

Definition	The complete library of IES standards and guidelines.
Description	Read lighting standards from IES committees, or explore with IES Lens for guided access to definitions, documents, references, and more.

IES Lens: “Ask”

Definition	An AI-assisted guide to navigate IES resources.
Description	Ask IES Lens to find standards excerpts, references, definitions, illuminance recommendations, and more.

Elearning (elearning.ies.org): “Learn”

Definition	An education hub for IES expertise.
Description	Learn from IES experts through in-depth courses, archived webinars and symposia, and more.

Your IES standards, wherever you need them. The enhanced IES Lighting Library brings subscriptions and leases into one browser-based collection, available on two personal devices. View, bookmark, and annotate standards on your computer, tablet, or phone, with offline browser access when you need it.

Find information your way. Browse standards, filter by topic, or search using natural language. IES Lens interprets your question and links you directly to the most relevant excerpts from IES resources including excerpts from standards, definitions, references, and illuminance recommendations, and link you directly to the source within the Lighting Library.

Answers connected to the source. Always. IES Lens searches exclusively within IES technical content. Results display as referenced excerpts and links directly to the relevant pages of IES standards, so you can review the source and its full context yourself.

AI assistance is optional. IES Lens is included with a Lighting Library subscription at no additional cost, but you remain in control of how you access IES content. Utilize the AI-assisted semantic search in IES Lens for enhanced curation, or disable the AI Guide in your account to utilize IES Lens for keyword search only.

One connected IES knowledge platform. The Lighting Library, Illuminance Selector, Reference Retriever, and Document Comparison capabilities come together in one experience, with IES Lens helping connect questions to relevant standards, tables, references, and source material.

You don't need to know exactly what IES calls it. Ask about a lighting application or challenge in everyday language. IES Lens uses context to identify relevant IES terminology, guidance, and table data, then connects you to the right page in the standard for further reading.

Choose the access that fits your needs. Subscribe to the complete Lighting Library (with IES Lens) or access individual documents through a three-year lease. Both use the same browser-based tools (bookmarks and annotations) and support offline browser access.

Understand what changed. Use IES Lens to explore differences between editions, including summaries of changes and additions. Subscribers receive access to deprecated standards for historical references.
